

Leak testing since 1973

Our customers deserve quality

- Leak Testing -

World-class leak detection

Nolek is a leading global supplier and manufacturer of equipment for everything related to leak detection, pressure testing and leak testing. During our four decades in the industry, we have developed and refined our methods and products, and we specialize in equipment adapted to our customers' specific conditions and needs.

The business was founded in 1973, and since then, we have steadily grown into one of the strongest players in the international market. Nolek has its main office in Norsborg, just south of Stockholm, but has operations and customers in over 20 countries. We manufacture machines and equipment for everything within leak detection, and over the years, have delivered thousands of systems to customers in every type of industry from the heavy metal and automotive industries to more precision-engineering solutions for, for example, pharmaceutical companies.

We believe in transparency and good guidance all the way from start to finish, and the fact that we take care of the entire process in-house guarantees first-class results.

We help our customers to deliver quality

The importance of maintaining high quality throughout the process is crucial for us at Nolek. Since we supply equipment and solutions that will help our customers to maintain a high level of quality, it can be said that we have a double responsibility for quality assurance.

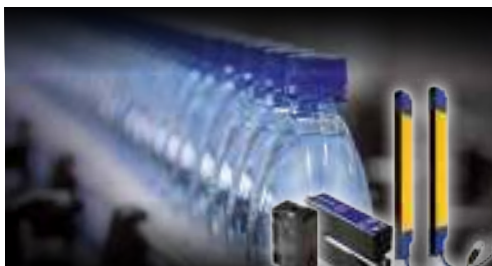

At Nolek, we carry out everything from design to production as well as the delivery of everything from simple fixtures to advanced systems and large machines. We are a complete partner that helps our customers to test virtually any equipment and any product.

But why the need for testing?

By performing leak tests you obtain an end product that is of high quality in addition to savings in terms of both time and money. In addition, it is in line with the requirements of sustainability and durability because the tested products mean less leakage and fewer transports. We simply help our customers to maintain a guaranteed high level of quality in regard to their customers. This benefits everyone in the long run.

“Quality is our guiding principle”

As global leader in Industrial Automation, and world-class producer of bar code readers, mobile computers, sensors for detection, measurement and safety, vision systems and laser marking equipment, Datalogic plays a leading role in the optimization of industrial processes – all over the world. Datalogic is in a unique position to deliver solutions that can make life easier and more efficient for people.

Unique solutions for our customers

We know that each customer and each individual industry has different requirements for quality, different conditions, and different customer segments. Therefore, over the years we have developed and refined our skills so that we can produce an analysis, present a solution, and then produce and deliver the right equipment for each individual customer.

At Nolek, we usually say that we deliver turnkey solutions that are custom designed based on our customers' businesses and needs. We take care of the entire process through sales, design and engineering, installation, servicing, calibration and development. By being responsible for the entire project, we give our customers a guarantee of a job well-done that is of high quality from start to finish.

But being a turnkey supplier is not only about quality assurance. It also means a faster and smoother process, without intermediaries, more cost-effective solutions, and a close dialog from start to finish.

Your natural manufacturing partner

EQ-mek use a CAD/CAM solution that allows advanced manufacturing with our CNC machines. Our machinery is well suited for the production of several materials, such as steel, aluminium, stainless steel, brass, copper and plastics.

EQ MEK has a long experience and broad expertise in CNC machining. We can help you produce complex parts in the prototype stage, and later with serial production. With extensive experience in milling of molds, tools, prototypes, rollers, shafts and other machine components, you can feel confident in our skills.

Products and production

Nolek's customers range from players in international heavy industries, such as the oil and automotive industries, to medical technology companies. Regardless of industry, we work with businesses that place high demands on hundred-percent leak-proof products and equipment in order to prevent leaks of gases, moisture and chemicals.

Since 1973, Nolek has been a strong producer and supplier of standard equipment, instruments and products. Through the years we have grown and developed our business and our selection, which has led to our currently being one of the foremost players in the market. At Nolek we also create tailor-made equipment for leak detection of moisture and gas, instruments for leak tests and calibration as well as software solutions for different systems. All our products are designed, produced and tested in several stages before delivery to the customer.

Nolek also offers customers tailor-made service solutions using our own systems and products. This can be seen as a guarantee and assurance that we, with short notice, can respond and assist with fast service and maintenance.

50 YEARS OF LEAK DETECTION

Experience makes sense!

Pfeiffer Vacuum is the supplier with the widest range of leak detectors on the market. We provide solutions for applications using helium and hydrogen as tracer gas. From portable devices to complex leak detection systems – we always offer the optimum solution to detect leakages in many different industrial sectors.

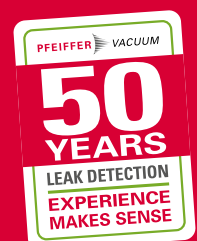

Competence, quality and service from a single source.

Quality at every stage

Nolek's vision and main goal is to help our customers develop their businesses. Our customers hire us in order to be free to produce and deliver products and services of the highest quality, which places an additional demand on us to ensure that what we do is one hundred percent right.

To become, be and maintain our strong market position, we need to have ongoing quality work that characterizes everything from design and production to customer care and service. We start from the premise that quality is not enough; we think our customers deserve services and products that are of an outstanding quality level.

The fact that today, we are a global leader and operate in over 20 countries worldwide, is a confirmation that our quality work has paid off - and that we must never compromise on quality if we are to maintain the same outstanding standard for another 40 years.
